DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Program Objectives

- To understand the concepts and features of object oriented programming
- To examine key aspects of java Standard API library such as util, io, applets, swings, GUI based controls.
- To learn java's exception handling mechanism, multithreading, packages and interfaces.
- To develop skills in internet programming using applets and swings
- To understand the basic concepts and fundamentals of platform independent object oriented language.
- To demonstrate skills in writing programs using exception handling techniques and multithreading.
- To understand streams and efficient user interface design techniques
- Be aware of the important topics and principles of software development.
- Have the ability to write a computer program to solve specified problems.
- Be able to use the Java SDK environment to create, debug and run simple Java programs

Course Outcomes:

At the end of the course, the student will be able to

1. Use the syntax and semantics of java programming language and basic concepts of OOP.
 2. Develop reusable programs using the concepts of inheritance, polymorphism, interfaces and packages.
 3. Apply the concepts of Multithreading and Exception handling to develop efficient and error free codes.
 4. Design event driven GUI and web related applications which mimic the real word scenarios.

Program Objectives

- Use programming operations to calculate solutions
- Determine better and more accurate solutions
- Perform and evaluate algebraic and trigonometric operations using built-in functions
- Assign and manage variables
- Manipulate vectors and matrices, use matrix indexing, and determine matrix dimensions
- Generate linearly spaced vectors
- Create and execute a script
- Create and evaluate x-y plots and subplots suitable for technical presentation
- Create, test, and execute user-defined functions and sub-functions
- Create function input validation
- Distinguish between the different MATLAB 'data types'
- Create and manipulate Structures and Arrays
- Perform and evaluate relational and logical operation.

Course Outcomes:

At the end of the course, the student will be able to

1. Students learned features of MAT LAB as a programming tool. They are fully familiar to all the features of MAT LAB software and easily handle the software.
2. New teaching model which include theory & practical running simultaneously is introduced to our students. This method is very effective and helped to develop programming skills and technique to solve mathematical problems.
3. Students learned graphic features of MAT LAB and they are able to use this feature effectively in the various applications.
4. Major outcome is students are able to work as a 'MAT LAB programmer' in the industry because of the hands on practical sessions. This job oriented course will helps students to get the jobs in future.

Respected sir,

Sub: - Approval for conducting an add-on course – Req - Reg.

This is to bring to your kind notice that an add-on course titled “Ethical Hacking & Cyber Security” is scheduled to be conducted by Mr. Dinesh (Ethical Hacking certified Trainer) for two weeks i.e., Nov-28-2016 to Dec-9-2016. It provides students an opportunity to gain practical knowledge, experience and subject which will be very much helpful in their career prospects. Hence, we request you to approve and accord permission for the same.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Program Objectives

- Explain basic cyber security terminology
- Have skills for keeping up to date on cyber security issues
- be able to identify information assets.
- Describe basic authentication mechanisms
- Have skills to improve their password security
- Be aware of alternative authentication methods.
- Identify main malware types
- Awareness of different malware propagation method
- skills for preventing malware infections.
- Demonstrate understanding of firewalls
- Virtual private networks and network intrusion detection and prevention technologies.
- Describe legal and regulatory issues relating to cyber security
- Understand how to recover from security failures.
- Apply basic risk analysis and management techniques.

Course Outcomes:

At the end of the course, the student will be able to

1. Analyze and resolve security issues in networks and computer systems to secure an IT infrastructure.
2. Design, develop, test and evaluate secure software.
3. Develop policies and procedures to manage enterprise security risks.
4. securing the systems and data from threats and attacks.
5. As an ethical hacker, you can: Conduct investigations and analyses of the target systems to identify any security or system vulnerabilities from the hacker's point of view and suggest a remedy.

Sub: -Approval for conducting a Value added course on HVAC -reg

This is to bring to your kind notice that the Department of Mechanical Engineering is planning to conduct a "Add-on course on Heating, Ventilation and Air Conditioning" from 16th to 22nd August 2016, which will provide students a practical perspective on the world of work. It provides students with an opportunity to learn practically through interaction, working methods and employment practices.

Hence we request you to accept our approval for conducting an event.

Forwarded for Approval.

ADDED COURSE ON HEATING, VENTILATION AND AIR CONDITIONING

Date: 16th – 22nd August, 2016

PROGRAMME OBJECTIVES

Heating, ventilation and air conditioning (HVAC) course is an indoor and vehicular environmental comforting technology. This course is designed to give basic information of refrigeration systems, properties of refrigerants, non-conventional systems. The course deals with vapor compression vapor absorption cycles and some non-conventional cycles, safety precautions during handling such systems.

- Explain in detail Basic Components of Air Conditioning & Refrigeration machines, Basic Refrigeration cycle, Accessories & Refrigerants
- Know the detail classification of Air-Conditioning System
- Study Psychometric Chart and various terminology
- Explain the Load calculations of Survey of Building, Ventilation requirement for IAQ, ESHF, ADP & Air Flow Rate(CFM)Calculation
- Explain Hydronic System, Water Piping, Fittings used in the HVAC Piping System Function, CHW Pipe supports & Pump Head Calculation

DAY-1: Inaugural and Technical Session

Objectives:

- Inaugural function held by the respective Dignitaries.
- Discuss an overview of HVAC, Applications in various fields.
- Basic Components of Air Conditioning & Refrigeration machines, Basic Refrigeration cycle, Accessories & Refrigerants
- Know the detail classification of Air-Conditioning System

Outcomes:

- Understand the Basic Components of Air Conditioning & Refrigeration machines, Basic Refrigeration cycle, Accessories & Refrigerants.
- Understand different types of air conditioning system and explore the applications in various fields.

DAY-2 : Technical Session

Objectives:

- Discuss on theory and Problems session on Psychometric Chart and its Applications in various fields.
- Know about the theory on heating ventilation.

Outcomes:

- Understand the Psychometric Chart and its use in problematic part.
- Understand the basics of heating and ventilation.

DAY-3: Technical Session

Objectives:

- Explain the Load calculations of Survey of Building, Ventilation requirement for IAQ, ESHF, ADP & Air Flow Rate(CFM)Calculation
- Explain Hydronic System, Water Piping, Fittings used in the HVAC Piping System Function, CHW Pipe supports & Pump Head Calculation

Outcomes:

- Understand the numerical calculations on of Survey of Building, Ventilation requirement for IAQ, ESHF, ADP & Air Flow Rate(CFM)Calculation
- Understand different types of systems equipped with ventilation and explore the applications in various fields.

DAY-4: Technical Session

Objectives:

- Learning the fundamental principles and different methods of refrigeration and air conditioning.
- Study of various refrigeration cycles and evaluate performance using Mollier charts and/ or refrigerant property tables.

Outcomes:

- Illustrate the fundamental principles and applications of refrigeration and air conditioning system
- Obtain cooling capacity and coefficient of performance by conducting test on vapour compression refrigeration systems

DAY-5: Technical Session

Objectives:

- Comparative study of different refrigerants with respect to properties, applications and environmental issues.
- Understand the basic air conditioning processes on psychometric charts, calculate cooling load for its applications in comfort and industrial air conditioning.

Outcomes:

- Present the properties, applications and environmental issues of different refrigerants
- Calculate cooling load for air conditioning systems used for various refrigeration cycles

DAY-6: Technical Session

Objectives:

- Study of the various equipment-operating principles, operating and safety controls employed in refrigeration air conditioning systems.

Outcomes:

- Operate and analyze the refrigeration and air conditioning systems.

**REPORT ON A ONE WEEK VALUE ADDED COURSE ON ENERGY AUDIT
CONSERVATION AND MANAGEMENT**

Name of the programme: **Value Added Course On Energy Audit Conservation and Management.**

Resource Person: Mr.R V Ramana Rao
Retd. Superintending Engineer from APEPDCL

A A One Week Value Added Course On Energy Audit Conservation And Management at BABA Institute of Technology And Sciences from 14th to 21th December 2016. The session was handled by the Retd. Superintending Engineer from APEPDCL Mr. V Ramana Rao.

Today, the local, regional and global negative effects of the traditional energy production and consumption technologies on the people, environment and natural resources have come to a serious state. In order to ensure the sustainable development and protect natural balance, it is vital to provide energy from consistent, safe, cheap, clean, good quality and domestic energy resources and use it efficiently. It is important to monitor eco-friendly energy efficiency policies for the economic development and progress of countries. Sustainable economic development based on energy efficiency should form the basis of energy policies of countries. If countries increase their economic activities by improving their environmental performance, they can reach a good level of energy efficiency. As long as the balance between economic growth and energy consumption is balanced, the energy efficiency of countries will increase. Energy efficiency has become important for the countries to provide sustainable development. Especially for reducing CO2 emission and effects of the climate change, energy efficiency has a key role for the energy efficiency.

This workshop enhances the practical knowledge of students to empower them with the recent developments in the core field and also to provide with a fair idea of the work environment at the power station.

DEPARTMENT OF MANAGEMENT STUDIES

OUTCOMES OF DISASTER MANAGEMENT

Natural and technological hazards affect the everyday life as well as long-term development plans. For many decades the prevailing approach in dealing with disasters was focus on response and recovery, however lately pre-disaster actions to minimize the disaster risks are encouraged.

The course introduces Disaster Management, focusing on natural disasters. The problem is addressed in a holistic cross-sectoral and cross-disciplinary manner, including all stages of disaster management cycle: mitigation, preparation, response and recovery. Starting with theory, main definitions and concepts, the course considers other aspects of Disaster Management cycle, such as International Agreements, impact of climate change and urbanization on severity and extent of disasters, case studies of disaster management on national and local levels, some DRR technologies.

Learning Outcomes:

- Understanding foundations of hazards, disasters and associated natural/social phenomena
- Familiarity with disaster management theory (cycle, phases)
- Knowledge about existing global frameworks and existing agreements (e.g. Sendai)
- Methods of community involvement as an essential part of successful DRR
- Humanitarian Assistance before and after disaster
- Technological innovations in Disaster Risk Reduction: Advantages and problems
- Experience on conducting independent DM study including data search, analysis and presentation of disaster case study

DEPARTMENT OF MANAGEMENT STUDIES

OUTCOMES OF Economic Reforms and Indian Capital Market

MBA students in general will be able to pinpoint and understand the past, present economic conditions of the country.

They will also be able to forecast the future course of changes and development through their knowledge of policies and programmes set by the governments and other development agencies. They are equipped with the techniques to find solution of the problems like mobilization of manpower and materials available in the country.

PO2: As the Under Graduate Course (UGC) contains the fields like statistics, mathematics and economics principles, it enhances them to compute and assess the real situation of the economy including the size and changes of population, income pattern, nature of an extend of employment, rate of development with pattern of investments and savings, policies in relation to other countries, and social security measures adopted in the country.

PO3: Basically, economic graduates are familiar with the knowledge and application of microeconomics and macroeconomics for the formulation of policies and planning. They are equipped with all the relevant tools/ knowledge based on economic principles including market functions and structures, efficiency

PROGRAM REPORT

Course Objectives

The course is designed to

- introduce the basic principles of Remote Sensing and GIS techniques.
- learn various types of satellite sensors and platforms
- learn concepts of visual and digital image analyses
- understand the principles of spatial analysis
- appreciate application of RS and GIS to Civil engineering

Course Out Comes:

- At the end of the course the student will be able to
- be familiar with ground, air and satellite based sensor platforms.
- interpret the aerial photographs and satellite imageries
- create and input spatial data for GIS application
- apply RS and GIS concepts in water resources engineering
- applications of various satellite data
